Database  
SQL Server 2005

## Description

Loan Servicing Solution (LSS) is built to carry out all the necessary servicing tasks for mortgages post completion until final redemption.

LSS is designed to be a comprehensive Servicing Solution whilst being efficient in operation. Flexible business parameters and unique features allow the system to be suitable for different Lender requirements.

All operations are audited at a business level with full internal accounting for financial audit. In addition accounting transactions and daily data are output to a Lender's own accounting and data warehousing systems as required, with ability to restrict process and data to individuals or groups based on assigned roles and permissions.
