MySQL with transaction compliant innodb
engine.

The screenshot shows the homepage of Scryptions International. The header includes the company logo and the tagline 'MEDICAL TRANSCRIPTION SOLUTIONS'. A navigation menu on the left lists 'HOME PAGE', 'SERVICES', 'NEWSROOMS', 'ABOUT US', 'LEARN MORE', 'CONTACT US', and 'CLIENT LOGIN'. The main content area features a 'HOME PAGE' section with the heading 'Scryptions International' and the sub-heading 'Your Rx for MEDICAL TRANSCRIPTION SOLUTIONS.' Below this is a photograph of a building and a paragraph describing the company as a blend of domestic and international workforces. A section titled 'Scryptions International Offers:' lists several services: a unique blend of management, domestic and international work force for on time turnaround, quality transcriptions, easy and secure file tracking, simple verifiable per character billing, HL7 interfacing, HIPAA compliance, front and backend speech recognition, and electronic signature. A link for 'VIEW OUR VIDEO PRESENTATION' is provided. The footer contains copyright information for 2005 Scryptions International and credits to Reins of Design.

Description

Scryptions International is a medical transcription services provider to large Hospitals in USA with its headquarters in Nevada, US. Scryptions Int client list includes several hundred large clinics and hospitals across US from east to west coast. The backbone of their operations is web based transcription management software.

Software has following salient features

- Manage heavy concurrency.
- Fast response time.
- Data integrity and security of data.
- HIPAA compliance.

Software manages more than 200,000 transactions per day for medical transcription voice files and related medical transcripts. GenX info technologies is involved in providing Iind tier software support to Scryptions since more than four years. The support is provided from its software development center in New Delhi India. GenX has developed core and additional functionalities in the software. We have made software more stable and efficient. We are also involved in software and database upgrades. Under other key initiatives we had proposed fail safe architecture for application and database there by reducing the downtime of the application substantially.
