

Exposure ... Portal Development

Client: Rema Tip Top, Australia	
Project Name: Order Management Portal	
Technology: <u>Development Technology:</u> .NET Framework 2.0, SOA based architecture <u>Operating systems</u> Windows XP, Windows 2003 Server <u>Database</u> SQL Server 2005	
Description	
<p>Rema Tip Top is a multinational company engaged in providing Repair and Maintenance supplies and services to large manufacturers of Tyres across the globe. The company is headquartered at Germany.</p>	
<p>GenX has been engaged by RTTA to study, design and develop a web based portal to manage the orders by its customers. The application is having interactions with existing ERP of Pronto for getting the inventory details about stock of supplies before booking the order. This also has the facility of shopping cart in which all the customers using the web based portal can add to the items to the cart and see the details at a later date for confirming the order.</p>	
<p>The portal is also having the functionality of posting financial information regarding confirmed order back to the ERP. Currently the portal has been implemented in Australia with upcoming plans for implementing it in different geographies across the globe in near future.</p>
